Identification of Outlier in a Conversation

Ananya Subburathinam
ICSI 660 – Social Computing
What I’m looking for:

• Participants in a conversation who introduce topics, and respond to others
• However, they are the most infrequently cited, or are ignored.
Motivation

• Once identified, could be used to study what makes an individual unwelcome in a group.

• Removing outliers could make the study of other behavioral patterns more efficient.
Parameters used for identification

• Low citation
• High/Moderate topic introduction
• Low network centrality
Thank You
